

UrbanMind Research Report

Abstract

UrbanMind is an AI-driven Smart City Intelligence Platform integrating Explainable AI, Digital Twin Intelligence, Governance Analytics, SDG Intelligence and Predictive Forecasting.

Methodology

The platform analyses environmental and urban indicators using Urban Scoring, Smart City Clustering, SHAP Explainability, Forecasting Models, Risk Intelligence and Governance Optimization.

Results

ABSTRACT

UrbanMind is an AI-driven Smart City Intelligence Platform integrating Digital Twins, Explainable AI, SDG Intelligence, Governance Analytics and Predictive Forecasting.

METHODOLOGY

Real-time environmental data was analysed using urban scoring, clustering, forecasting and risk intelligence models.

RESULTS

Best City: Hyderabad

Priority City: Delhi

Urban Intelligence Index: 60.8

FINDINGS

Forecast confidence reached 85% and Digital Twin monitoring remained active.

FUTURE WORK

Integration of IoT streams, satellite imagery, traffic intelligence and multimodal urban AI.

Findings

UrbanMind identified leading and high-risk cities, generated predictive intelligence scores, governance recommendations and Digital Twin simulations for future planning.

Future Work

Future enhancements include LSTM forecasting, IoT integration, satellite imagery analytics, multimodal urban intelligence and policy optimization engines.
